As a dedicated programmer with extensive experience in developing, integrating, and supporting applications, I have consistently delivered high-quality solutions that enhance productivity, efficiency, and security. I am passionate about continuous growth and believe that true productivity is best achieved by creating measurable impacts that help people. My goal is to exploit my technical expertise and project management experience to contribute to innovative projects that create real impact and to be as useful as possible to my team.

Work Experience

- **Programmer/Analyst III – Tucson Electric Power | September 2025 – Present**
 - Team-Lead
 - Assumed Project Manager role mid-way through a new implementation
 - Continued to perform all functions of the previous role
- **Programmer/Analyst II – Tucson Electric Power | March 2021 – September 2025**
 - Developed production .NET Blazor web applications integrating with several other internal systems.
 - Locally hosted various Large Language Models with custom RAG using Docker, Ollama and WebUI.
 - Automated and integrated multiple systems to enhance efficiency using PowerShell.
 - Created Splunk dashboards to provide my team with near real-time metrics on server and application performance.
 - Monitored and supported production servers using VSphere.
 - Maintained software licensing and compliance.
 - Led server migrations and upgrades, both CIP and non-CIP.
 - Trained new-hires on internal systems, processes and CIP regulation.
 - Continued to perform all functions of the previous role.
- **Programmer/Analyst I – Tucson Electric Power | May 2019 – March 2021**
 - Served as the Technical Lead on multiple large projects, collaborating directly with stakeholders.
 - Implemented and supported Critical Infrastructure Protection (CIP) applications.
 - Developed Java Spring web applications integrated with Oracle databases.
 - Created dozens of automations/scripts, saving thousands of man-hours.
 - Developed application integrations using Python and PowerShell.
 - Updated and maintained C#/ASP.NET web applications.
 - Provided advanced support for over 100 applications.
 - Acted as the company's Subject Matter Expert for Vault Professional.
- **Web & Mobile Team Student Intern – Tucson Electric Power | March 2018 – May 2019**
 - Developed an internal Java Spring web application with a REST API and Spring Boot CLI.
 - Created unit tests for Java and Spring applications using JUnit and Mockito.
 - Gained CI/CD experience using Jenkins, integrating builds with GitHub, Sonar, and Nexus.
 - Automated Angular JavaScript testing and release builds using Jenkins and Karma.
 - Developed and modified Python scripts for API implementation.
 - Led Client Needs Assessments (CNAs) and participated in UATs and QA testing.
 - Documented software for end users and support technicians.
